

Detection and Mitigation of Corrupted Information in Distributed Model Predictive Control Based on Resource Allocation

R. A. Nogueira R. Bourdais H. Guéguen

AUT Department
IETR — CentraleSupélec

5th International Conference on Control and Fault-Tolerant Systems, 2021

Outline

- 1 Motivation
 - The Basic Problem That We Studied
 - Previous Work
- 2 Our Results/Contribution
 - Main Results
 - Basic Ideas for Proofs/Implementation

Make Titles Informative. Use Uppercase Letters.

Subtitles are optional.

- Use `itemize` a lot.
- Use very short sentences or short phrases.

Make Titles Informative.

You can create overlays. . .

- using the `pause` command:
 - First item.
 - Second item.
- using overlay specifications:
 - First item.
 - Second item.
- using the general `uncover` command:
 - First item.
 - Second item.

Make Titles Informative.

You can create overlays. . .

- using the `pause` command:
 - First item.
 - Second item.
- using overlay specifications:
 - First item.
 - Second item.
- using the general `uncover` command:
 - First item.
 - Second item.

Make Titles Informative.

You can create overlays. . .

- using the `pause` command:
 - First item.
 - Second item.
- using overlay specifications:

Summary

- ① Resource allocation based DMPC is vulnerable to attacks.
- ② Sub-problems structure has time invariant parameters.
- ③ Attack can be estimated using these parameters.
- Outlook
 - Inequality Constraints yield Hybrid behavior
 - Non-linear attack model
